		Roles assignment happens in IdentityIQ. Provisioning of the entitlements is a separate action
3-44	2	that requires the Provision Assignments refresh option.
3-45	4a	Detected during aggregation
3-45	4b	Time Tracking entitlements approve and reject
3-45	4c	Yes, Manager access
3-46	5a	It was assigned. Her Manager access business role was automatically assigned because Amanda meets its membership criteria (Manager Status = True, Inactive = False). The role's assignment logic was evaluated during the Refresh Identity Cube task because the option Refresh assigned, detected roles and promote additional entitlements was selected.
3-46	5b	Her Manager access for Time Tracking IT Role is allowed by this Manager access business role. We defined this relationship by associating the required IT role to the business role.
3-46	5c	You can submit a request for the role for her.
3-48	2	type == employee AND inactive == FALSE. This is the criteria you defined in the Active employee population
3-48	2	Employees group
3-49	4	input capability on Time Tracking application; asiapacific_read group on Chat; Europe Population
3-49	5	Is Correlated: True; identity cubes created by aggregation of an authorative applications are created with the flag correlated=true. So this means that the identity originated from one of the authorative applications Is Inactive: False looks for identity cubes that are 'active'
